

PRAMAN · 01

Proof of compliance, on demand.

The sovereign, continuous compliance-assurance platform for AI and data-centre workloads in India.

- " DPDP Act 2023 + CERT-In, evaluated continuously against your live systems.
- " Tamper-evident, regulator-ready evidence exported in one click.
- " 100% self-hostable and in-region. No foreign dependency.

A product of Zyvark Solutions · praman.zyvark.in

The problem

Every Indian company that touches personal data must prove DPDP and CERT-In compliance and the deadline is fixed.

" DPDP Rules notified Nov 2025; full compliance due 13 May 2027.

" CERT-In already enforces a six-hour breach-reporting window today.

" AI broke the old tools: personal data now leaks into foreign LLM prompts, invisible to consent banners.

" Operators must hand tenants and auditors evidence they cannot quickly produce.

The platform eight modules, one engine

- " Compliance Posture: a live readiness score and countdown to enforcement.
- " Assets & Data Map: a registry of systems, pipelines and flows as a jurisdiction-coloured graph.
- " Rule Engine: DPDP + CERT-In obligations as versioned data, each with its citation.
- " PII Classifier: in-region detection of Aadhaar, PAN, phone, email never a foreign API.
- " Egress Monitor: every outbound flow classified by jurisdiction and controller.
- " Breach Workflow: two-tier DPDP notification and the CERT-In six-hour clock.
- " Tamper-Evident Audit Trail: an append-only hash-chained log with one-click verification.
- " Audit Pack Export: a regulator-ready PDF plus JSON evidence, carrying its own integrity certificate.

How it works

01 • Watch

Register assets, workloads and flows by hand, CSV or ingest. Personal data is classified in-region.

02 • Measure

The rule engine evaluates your live state against versioned DPDP and CERT-In obligations.

03 • Prove

Every result writes to a tamper-evident log. Export an Audit Pack with an integrity certificate.

PRAMAN · 05

Built for India's data-centre industry

Sovereign-cloud and data-centre operators carry compliance weight for everyone they host. Praman gives them tenant-ready proof.

- " Map every asset and data flow across the facility and its tenants.
- " Classify egress to foreign clouds and foreign model APIs by jurisdiction.
- " Export Audit Packs scoped to a single tenant or workload.
- " Flag declared-vs-discovered drift the gap that trips most audits.

PRAMAN · 06

Why Praman wins

- " Infra & AI layer, not consent banners the gap incumbents skipped.
- " Sovereign by construction one `docker compose up` runs the whole stack in-region.
- " Tamper-evident evidence auditor- and insurer-grade proof, not screenshots.
- " Law-as-data new rules (RBI, SEBI, sectoral) ship without a software release.
